

Guardian

Smart home security for Camposol

One off install price, no monthly fees. With self-monitoring

Guardian is an affordable smart home monitoring system put together from various sources by Compusurf in collaboration with the USA's very popular ismartalarm security system. When the system is armed, the moment any sensor or camera is tripped, you will automatically be alerted on your phone as well as whoever you select to watch your system for you when you are not around, this is your guardian, your chosen guardian of your system

can call you, to check it's not a false alarm and even call the Police if you are not contactable, this allows you increased peace of mind that in the event of an intrusion into your property, even when you do not have your phone to hand or have access to the internet, your property is still being watched. After consulting with the relevant groups it has been agreed that, after calling the police, a post can be made on the Camposol security group Facebook page by yourself or your guardian identifying the locality of the crime in progress, without giving away exact address details, your neighborhood will be made aware via social media that thieves are operating and can take the necessary precautions to protect their own properties and report any sightings of suspicious activity to the police. This vastly improves the chances of the thieves being spotted, even identified and improves the likelihood of their capture by the Police. Having a guardian is far more effective than simply knowing you're being burgled when you are a thousand miles away or simply off the radar for whatever reason.

If you are a Compusurf customer living on Camposol we will soon have an exclusive totally free option in respect of your chosen guardian. Details available on request.

Camposol security groups are pleased to be associated with this crime prevention initiative by Compusurf. This pro-active action should help us achieve our aim to make Camposol a safer place to life and work.

Alarm System plus CCTV Complete system with all you need plus CCTV

Supplied and installed for a one off price of **€225 including iva**. The kit includes:

- Central control module
- Internal 110db siren, can be disabled for stealth mode
- 1X high quality CCTV camera with Microphone
- 1x door / window contact sensor
- 1x PIR 90 degree motion sensor
- 1x arm/disarm key fob with panic alarm
- Comprehensive , simple to use control app
- Free remote self-monitoring
- Ability to add extra CCTV cameras, smart plugs and extra sensors

The control module is hard wired to your internet connection so cannot be jammed, an Android or Apple smartphone or tablet is required for the app and self-monitoring. A PC based version is planned for the future. The sensors require no cables or drilling of any holes and can be fitted anywhere. Cameras require a power source only, the hardware is manufactured by one of the USA's leading companies in smart home technology called "ismartalarm". Additional components and replacement parts are also available from Leroy Merlin and other electronic outlets.

Below are the current prices for some of the extra components

Camera €59

Contact €34

Fob €30

PIR €40

Extra siren €60

Smart plug €46

You have total control over your system from your phone or tablet anywhere in the world providing you have an Internet connection at your location, the software is comprehensive but simple to use. You can even add smart sockets and remote control electrical appliances in your home. ismartalarm is more than a simple alarm, its limited only by your imagination as the system fully integrates with the ifttt home automation app.

Using the app anytime, anywhere on any internet connection you can:

- Arm / Disarm the system
- Check you have not forgotten to close a door or window that has a contact sensor.
- View logs to see at what times doors or windows have been opened or closed when in disarm or arm mode.
- View live feed from your camera or cameras (CCTV version only)
- Listen in (CCTV version only)
- Record footage, take snapshots (CCTV version only)
- Check the battery level of all sensors
- Remotely operate appliances plugged into a smart socket (smart socket required)
- Check all sensors are working
- Update the software in your control module as new features become available.
